Dear Planners,

Thank you for your volunteer effort on behalf of our community. Please include provisions for taking climate change into account in the comprehensive plan. I suggest the following:

- Impact of extreme weather events and long-term climate change will be considered in all planning. Scientific data on current and future projections of climate conditions will be used, especially in consideration of water availability & quantity, air quality, wildfire safety, and soil stability.
- The reduction of greenhouse gas emissions and the expansion of factors of climate resiliency will be considered in all planning. Scientific data on current and future projections of climate conditions will be used, especially in consideration of transportation, buildings, preservation of natural areas (trees) for carbon sequestration.

Again, thank you.

Christine Moon
