I already voiced my concern at one of the workshops but I want to put it in writing with more detail. Several people have expressed in public comments that climate change should be addressed in the Comprehensive Plan. I am staunchly opposed.

Notwithstanding the fact that CO2 makes up about four hundredths of one percent of our atmosphere and man is responsible for arguably 3-4% of that, this discussion has no proper place in Bonner County Planning. We cannot affect the percentage of CO2 no matter what, and pretending to will only cost taxpayers more in a time of already high inflation by growing government when we should be reducing it.

Incorporating climate change into our Comprehensive Plan would only serve to make hand-wringers feel good while doing absolutely nothing to serve the People or for that matter, the planet.

Please incorporate my comments into the record.

Thanks very much.
