This proposed project requires the applicant to submit an application to PHD for a septic system to serve the proposed commercial operation. The existing septic system is not approved for this use. This project also requires the applicant to submit an application to PHD for a food establishment license. Furthermore the water source must meet standards as required per the Idaho Food Code. AT this time PHD does not have adequate information to verify whether this project as proposed is feasible. The applicant should contact PHD promptly and submit the necessary applications and information for PHD to properly assess the proposal. PHD does not recommend approval of the CUP until adequate sanitary services have been verified.
