This is intended as Panhandle Health District (PHD) comments for CUP application CUP0002-24 for a proposed Recreation Facility.

PHD has not received any permit applications for the proposed wastewater discharges described in this application. More information is necessary for PHD to properly assess the project for compliance with the Idaho rules & guidance.

The CUP application seems to suggest the project will not need any permits for wastewater disposal facilities; however, based on what PHD observed in the application, that is incorrect. At a minimum, they will need approved systems to discharge all grey water generated by the camp sites (even if the fresh water is brought in from an offsite location). It is unclear if any other permits may be necessary, as the Bonner County CUP application does not have adequate information for PHD to properly review the proposal relative to our rules & guidance. The landowner/applicant will need to work directly with PHD to obtain proper & compliant guidance regarding their options for adequate sanitary services.

PHD recommends Bonner County require verification the proposed project is compliant with Idaho rules pertaining to sanitary services (water and/or sewer), from the appropriate regulatory authority, as part of the CUP conditions.

This form was created inside of Bonner County.
