Planning,

The Bonner County Road & Bridge Department has the following comments regarding this file:

1. The applicants previously applied for a road approach encroachment permit for the connection to Sherwood Beach Road, but never completed the process nor got a final inspection during the initial build phases of the prior Yoman Bluffs subdivision. That permit is now expired. They will need to start that process over to complete the road approach approvals.
2. The southern border is adjacent to an existing public ROW, Maiden Lane, which is primitive, but driveable. Show this public ROW on the plat.
3. The locals use Maiden Lane as noted above as secondary access, especially during winter months when the steep grades going southbound up into Coolin make egress difficult or impossible when slick. They drive into the subject property on the existing access road which follows the sewer easement and connects down to Sherwood Beach Road. If the owners of the subject property are willing, granting a legal access to the neighbors to use this route down the hill would be helpful for the neighbors for emergency/winter access. The prior attempt to plat this property under the Yoman Bluffs subdivision was going to dedicate Yoman Drive to the public, which would provide connected public ROW access, but with this new PUD Yoman Drive is proposed to be a private road, which makes access out to the north and downhill an issue.
4. The project narrative states, *"Interior roadways in the development will be privately maintained roads designed per the Bonner County Road Standards Manual [BCRSM]."* The BCRSM only applies to public roads and is not applicable on the private interior roads. With these roads within the PUD being private roads, they need to be constructed to meet the Private Road Standards as established by Appendix A of Title 12 of Bonner County code. The Road & Bridge Department only has jurisdiction over public roadways, and has not reviewed their proposed roadway plans for compliance with the Private Road Standards.
5. The project narrative states, *"The expected average daily traffic is 230 vehicles per day. As presented in the Trip generation Letter, the peak hour trips expected are 17 vehicles per hour (vph). This value falls well below the typical threshold of 50-vph which the County uses as a basis to require a traffic impact study."* That is only one of the criteria which is used to consider when a traffic impact study is needed. Two of the other criteria are:
 - The project is proposed along a route that historically experiences or is projected to experience traffic safety issues.
 - The project is proposed within the vicinity of a school, **community park**, or some other **area with high levels of pedestrian and neighborhood activity**.

The proximity to the public park, boat ramp, beach access, and the large volumes of pedestrian traffic walking along Bayview Drive/Sherwood Beach Rd between Coolin, the park, the store, etc, is cause for concern. It is the opinion of the Road & Bridge Department that an additional 230 vehicles per day is cause for concern and this should be evaluated with a traffic impact study to evaluate if pedestrian facility upgrades are warranted.

IDAHO DEPARTMENT OF FISH AND GAME

PANHANDLE REGION

2885 West Kathleen Avenue
Coeur d'Alene, Idaho 83815

Brad Little / Governor
Jim Fredericks / Director

December 8, 2025

Bonner County Planning Department
1500 Highway 2, Suite 208
Sandpoint, ID 83864

REFERENCE: S0003-25 & PUD1-25 – Yoman Bluffs PUD/Subdivision

The Idaho Department of Fish and Game (IDFG) has reviewed the above-named application proposing to divide one (1) approximately 37.6-acre parcel into twenty three (23) lots and three (3) tracts. The parcel is zoned Recreation and is located off Sherwood Beach Road near Coolin. The purpose of these comments is to assist the decision-making authority by providing technical information that can be used to minimize fish and wildlife impacts.

Each new subdivision displaces wildlife, fragments habitat, restricts animal movements, and permanently reduces the capability of Bonner County to support future wildlife populations. The following suggestions, if implemented and included in covenants where applicable, will reduce but not ameliorate impacts to wildlife from this proposal. Unfortunately, other proposals in this area will likely follow in the future, leading to additional cumulative impacts to the County's wildlife populations.

Proposed lots will range from 1.1 to 2.1 acres with nearly 11 acres of open space/common area. There are no waterways or wetlands located on the property. The property is bordered by State of Idaho parcels to the south and east, and Priest Lake to the west. It is currently timbered and mostly flat except for the "bluff" on the western edge of the property.

There are four (4) Endangered Species Act (ESA) listed species found in the area surrounding the proposed project. All listed as threatened by the United States Fish and Wildlife Service (FWS):

- Canada Lynx
- Grizzly Bear
- Wolverine
- Bull Trout

The terrestrial species on this list generally prefer higher elevations and shy away from human activity so rural development will likely not have an impact on them, but IDFG does have both confirmed Canada Lynx and Grizzly Bear sightings close to the parcel. Precautions should be taken by residents to avoid attracting grizzly bears to the area.

Keeping Idaho's Wildlife Heritage

Deer and turkey may remain in the area and may be problematic to residents. The area is rurally developed along the shoreline of Priest Lake, and the large, intact tracts of timber in the area still provide habitat. Moose, elk, black bear, grizzly bear and mountain lion may occasionally pass through. The Department will not be responsible for losses of domestic animals (dogs, cats, livestock), ornamental plants, or private property.

Recommendations:

- IDFG recommends that all BMPs for erosion and sedimentation be adhered to, and that a suitable stormwater plan be implemented to protect the water quality of Priest Lake
- As much natural vegetation and timber as practical for construction and fire prevention be left intact
- All exterior lighting be downcast

The following are general wildlife considerations for residential development:

- 1) **Avoid storing residential garbage outside, bear-proof dumpsters should be used**, and an adequate garbage collection system should be designed and implemented.
- 2) Due to several recent incidences of big game mortality due to the ingestion of yew, Idaho Fish and Game strongly discourages the planting of any toxic yew species in the proposed subdivision. Four types of yew or their hybrids are commonly found in residential and commercial landscapes across the west. Japanese yew is the most common type planted in Idaho. All four are toxic to a variety of animals including domestic livestock, horses, wild ungulates (deer and elk), dogs, cats and humans:
 - **Japanese yew** (*Taxus cuspidate*)—native to Japan and neighboring regions; many varieties are widely planted in the US; a shrub or small tree, with some varieties reaching 40 feet tall.
 - **English yew or European yew** (*Taxus baccata*)—native to Eurasia; many varieties are widely planted in the US; a shrub or small tree, with some varieties reaching 50 feet tall.
 - **Chinese yew** (*Taxus chinensis*, *T. sumatrana*, *T. celebica*)—native to Asia; a few varieties of these three species are sometime planted in the US; a shrub or small tree.
 - **Canadian yew, Northern yew** (*Taxus canadensis*)—native to eastern North America; a few varieties are planted in the US; a low-growing shrub to 5 feet tall.
- 3) Residents should be informed on how to avoid attracting bears, raccoons, and skunks. For instance, cleaning barbecue grills frequently, to avoid leaving pet food outside, not distributing bird feed on the ground, and protecting compost piles and fruit trees.
- 4) Purposely feeding wild animals creates an unnatural situation and may cause local population increases, which may create an unwanted nuisance for neighboring residents and eventually, the resident that is providing the food. An increase in the local deer population creates a hazard for motorists and animals. Many animals are hit by cars when moving from one feeding area to another. Additionally, when being chased by dogs, deer can become tangled in garden fences, run through picture windows, or dart into

oncoming traffic. Also, concentrating large numbers of animals in a small area can facilitate local disease outbreaks and/or attract predators such as mountain lions.

- 5) **DO NOT FEED BEARS.** Bears that obtain human food, garbage or pet foods lose their natural fear of humans and can become dangerous. Bears that are habituated to these unnatural food sources can damage vehicles, tear into tents, cabins, or barns, or aggressively approach people looking for food. Bears that continue to seek human food may require trapping and euthanization. Bears displaying dangerous behavior toward people will require euthanization. This is an undesirable situation, as it is labor intensive and an unnecessary waste of wildlife.
- 6) Bird seed or corn distributed on the ground may attract wild turkeys, waterfowl, and **bears**. This unnatural situation often increases the local waterfowl and turkey population, which frequently causes damage to private property and leads to human/wildlife conflicts. IDFG will not be responsible for property damage caused by waterfowl or wild turkeys, nor will the Department trap and remove birds that have become accustomed to being fed by residents. Bird feeders should be routinely cleaned to prevent the spread of disease.

Thank you for the opportunity to comment.

Sincerely,

Carson Watkins
Panhandle Regional Supervisor

Subject: Comments on PUD0001-25 – Concerns Regarding Adjacent State Endowment Lands

To Bonner County Planning Staff,

Thank you for the opportunity to provide comments on PUD001-25. As the manager of adjacent state-endowed parcels, I would like to note several ongoing issues relevant to any proposed subdivision or recreational development adjacent to these lands.

We have experienced recurring trespass problems from neighboring residential encroachments onto state endowment parcels. These issues typically increase when new subdivisions are developed near trust-managed lands.

In addition, where recreational uses are present, we have seen unauthorized trail construction and expansion onto endowment lands. These illegal trails create resource damage, complicate land management, and conflict with the trust obligations associated with endowment parcels.

The adjacent state endowment lands are actively managed for timber production, and future timber harvests will occur as part of long-term management plans. The Idaho Department of Lands manages these parcels to maximize long-term financial returns to the Public School Endowment, consistent with its constitutional and fiduciary responsibilities.

A clear disclosure to future residents about property boundaries, permitted uses of state land, and the fact that they will be living next to an actively managed working forest would be appreciated as the subdivision is developed and advertised.

Regards,

Dan Brown

Area Manager, Priest Lake

Idaho Department of Lands

Steven Binnall – GO Land Surveying, PLLC - Representative

Good morning,

Idaho Department of Water Resources (IDWR) – Northern Regional Office offers the following comments:

- Any water uses from an existing ground water well(s) that do not have established water rights, which shall exceed water uses authorized in Idaho Code §42-111 following project completion: a new Application for Permit is required prior to the diversion of water, and the property owner needs to contact IDWR to discuss water right requirements.
- Any water uses that contemplate diversion of surface water source(s) (River, Stream, Spring) require an approved Water Permit prior to the diversion of water in accordance with Idaho Code §42-351. **The property owner(s) are required to contact IDWR to discuss water right requirements for the storage pond located on the parcel(s).** IDWR doesn't show any existing recorded water rights on file for the impoundment of water related to the pond.

Thank you for the opportunity to comment,

Luke Bates – Sr Water Resource Agent
