Hi Janna,

Please find corresponding Idaho Department of Fish and Game comments attached.

Thank you,

Merritt Horsmon

Regional Technical Assistance Manager

Subject: Bonner County Planning - SS0004-25 Agency Review - Short Plat - Meadow Ridge Estates

CAUTION: This email originated outside the State of Idaho network. Verify links and attachments BEFORE you click or open, even if you recognize and/or trust the sender. Contact your agency service desk with any concerns.

The above-named application has been submitted to the Bonner County Planning Department for processing.

Please review the application relative to your agency's area of expertise and include any recommended conditions of approval and supporting code sections. Please see attached for details.

Thank you,

Janna Brown, Administrative Assistant III

Bonner County Planning Department

208-265-1458 ext - 1252

Now Live: Apply for Your Building Location Permit Online!

We're making building easier! You can now apply for your **Building Location Permit** quickly and securely through our **new citizen online portal**, available 24/7 from the comfort of your home or office. You can also apply on one of the kiosks provided in the Planning Department office, located in the County Administrative Building, Suite 208.

Fast & easy application process

Track your permit status in real time

Upload documents directly

Visit <https://bonnercountyid-energovweb.tylerhost.net/apps/selfservice#/home> **to get started today!**

Online Application Guide

Effective July 1, 2025, all Building Location Permits must be applied for through the online citizen portal and we will no longer be accepting applications sent via email or printed paper applications. Have questions? Call 208-265-1458, our team is ready to help.

Build smarter. Apply online.

IDAHO DEPARTMENT OF FISH AND GAME

PANHANDLE REGION
2885 West Kathleen Avenue
Coeur d'Alene, Idaho 83815

Brad Little / Governor
Jim Fredericks / Director

August 21, 2025

Bonner County Planning Department
1500 Highway 2, Suite 208
Sandpoint, ID 83864

REFERENCE: SS0004-25 – Meadow Ridge Estates

The Idaho Department of Fish and Game (IDFG) has reviewed the above-named application proposing to divide one (1) approximately 25.80-acre parcel and one (1) approximately 93.160-acre parcel into four (4) 10-acre lots with approximately 78-acres remaining. The area is Zoned Rural 10 and Ag/Forest 10 and is located off of Wrenco Loop near Sandpoint. The purpose of these comments is to assist the decision-making authority by providing technical information that can be used to minimize fish and wildlife impacts.

Each new subdivision displaces wildlife, fragments habitat, restricts animal movements, and permanently reduces the capability of Bonner County to support future wildlife populations. The following suggestions, if implemented and included in covenants where applicable, will reduce but not ameliorate impacts to wildlife from this proposal. Unfortunately, other proposals in this area will likely follow in the future, leading to additional cumulative impacts to the County's wildlife populations.

Lots 1-4 are bisected by a small freshwater emergent wetland that appears to be in the form of a small intermittent stream according to the USFWS National Wetlands Inventory Map. According to Bonner County Code 12-731A a wetland reconnaissance by a wetland professional is required to determine if in fact the area contains wetlands, and to more accurately delineate those wetlands if present. If wetlands are located, IDFG recommends that Bonner County Code section 12-733 be adhered to and minimum setbacks be required.

Deer and turkey may remain in the area and may be problematic to residents. The area is rurally developed but a few large tracts of timber in the area still provide habitat. Moose, elk, black bear and mountain lion may occasionally pass through. The Department will not be responsible for losses of domestic animals (dogs, cats, livestock), ornamental plants, or private property.

As the amount of suburban development in the area continues to grow, we have seen an increase in the number of deer and elk caught in fencing. Wrought-iron fences have proven particularly hazardous to deer in suburban areas, with adults impaled on fence spikes and fawns trapped between bars. This can be disturbing to residents, may damage property, and creates an undue

burden on IDFG staff resources. If perimeter fencing cannot be avoided, we recommend wildlife-friendly fencing (such as post and rail) that allows animals to move through unrestricted. Woven wire and chain link fencing result in entanglement and injury to deer and elk. Exclusion fencing (e.g., chain link with slats, wood slat) is recommended for smaller areas such as gardens or pet runs. Wildlife friendly fencing guides are available online.

IDFG recommends that all BMPs for erosion and sedimentation be adhered to, and that a suitable stormwater plan be implemented.

The following are general wildlife considerations for residential development:

- 1) **Avoid storing residential garbage outside, bear-proof dumpsters should be used,** and an adequate garbage collection system should be designed and implemented.
- 2) Due to several recent incidences of big game mortality due to the ingestion of yew, Idaho Fish and Game strongly discourages the planting of any toxic yew species in the proposed subdivision. Four types of yew or their hybrids are commonly found in residential and commercial landscapes across the west. Japanese yew is the most common type planted in Idaho. All four are toxic to a variety of animals including domestic livestock, horses, wild ungulates (deer and elk), dogs, cats and humans:
 - **Japanese yew** (*Taxus cuspidate*)—native to Japan and neighboring regions; many varieties are widely planted in the US; a shrub or small tree, with some varieties reaching 40 feet tall.
 - **English yew or European yew** (*Taxus baccata*)—native to Eurasia; many varieties are widely planted in the US; a shrub or small tree, with some varieties reaching 50 feet tall.
 - **Chinese yew** (*Taxus chinensis*, *T. sumatrana*, *T. celebica*)—native to Asia; a few varieties of these three species are sometime planted in the US; a shrub or small tree.
 - **Canadian yew, Northern yew** (*Taxus canadensis*)—native to eastern North America; a few varieties are planted in the US; a low-growing shrub to 5 feet tall.
- 3) Residents should be informed on how to avoid attracting bears, raccoons, and skunks. For instance, cleaning barbecue grills frequently, to avoid leaving pet food outside, not distributing bird feed on the ground, and protecting compost piles and fruit trees.
- 4) Purposely feeding wild animals creates an unnatural situation and may cause local population increases, which may create an unwanted nuisance for neighboring residents and eventually, the resident that is providing the food. An increase in the local deer population creates a hazard for motorists and animals. Many animals are hit by cars when moving from one feeding area to another. Additionally, when being chased by dogs, deer can become tangled in garden fences, run through picture windows, or dart into oncoming traffic. Also, concentrating large numbers of animals in a small area can facilitate local disease outbreaks and/or attract predators such as mountain lions.
- 5) **DO NOT FEED BEARS.** Bears that obtain human food, garbage or pet foods lose their natural fear of humans and can become dangerous. Bears that are habituated to these unnatural food sources can damage vehicles, tear into tents, cabins, or barns, or

aggressively approach people looking for food. Bears that continue to seek human food may require trapping and euthanization. Bears displaying dangerous behavior toward people will require euthanization. This is an undesirable situation, as it is labor intensive and an unnecessary waste of wildlife.

- 6) Bird seed or corn distributed on the ground may attract wild turkeys, waterfowl, and **bears**. This unnatural situation often increases the local waterfowl and turkey population, which frequently causes damage to private property and leads to human/wildlife conflicts. IDFG will not be responsible for property damage caused by waterfowl or wild turkeys, nor will the Department trap and remove birds that have become accustomed to being fed by residents. Bird feeders should be routinely cleaned to prevent the spread of disease.

Thank you for the opportunity to comment.

Sincerely,

Mark Rhodes (RCO) for CW

Carson Watkins
Panhandle Regional Supervisor
