DEQ Comments <deqcomments@deq.idaho.gov>

Development setbacks from stream banks and lake shorelines are an important tool for protecting water quality. Riparian vegetation provides natural filtration of stormwater runoff and provides numerous other benefits to promote healthy surface water ecology. DEQ recognizes that there are sometimes unique circumstances that may justify reduced setbacks. While an individual variance likely has a relatively small impact on water quality, the cumulative impact of development in close proximity to shorelines and stream banks is a significant threat to water quality. DEQ advises local government planning departments to maintain established setbacks whenever possible. Exceptions should be considered carefully by the local jurisdiction and used only when absolutely necessary to accommodate unique circumstances.

If you have any questions about the comments this project has received please contact:

- Katy Baker-Casile for engineering and wastewater.
- Anna Moody for drinking water.
- Shawn Sweetapple for air quality.
- Kevin Aardahl for remediation or RCRA.
- Robert Steed for surface water and setback requirements.

Thank you-

RE: V0012-25 – LECHOT BULK INCREASE

Panhandle Health District has reviewed the Bonner County Planning Application referenced above for RP55N02W070660A (187 N Terrace Drive), and has the following comments:

A review of PHD records indicates that the parcel associated with this variance application should be served by an Individual Sewage Disposal System, however a septic permit could not be found in PHD files. If the applicant has a copy of their septic permit, they should submit it to PHD to update any historical records for future approvals on BLPs or septic repairs.

The structure does not discharge wastewater and would not affect septic; the structure appears to be located within 30 feet of the lake inside a surface water setback where septic components would not be permitted (IDAPA 58.01.03).

Best Regards,

Sarah Tonyan, REHS
