Today 4:50 PM

The well is a "Sandpoint Well)

A jet pump is used to pump water from the well to and through the water filtration system which performs the following:

- **Activated Carbon Filters:** Remove chlorine, sediment, and odors, improving taste and smell.
- **Reverse Osmosis (RO):** Uses a semipermeable membrane to remove a wide range of impurities, including heavy metals and dissolved salts.
- **UV Purification:** Uses ultraviolet light to kill bacteria and viruses without chemicals.
- **Sediment Filters:** Capture larger particles like sand, dirt, and rust.
